Sample: acceptance test plan with my results

This is a sample artifact from an AI-driven delivery process, attached to the article "AI SDLC: cheaper code & new risks to manage". The Dispatcher, an AI agent that plans the work and runs coding sub-agents, wrote it at the end of the second run, for the owner to check the features by hand. I ran the tests and typed my results in the grey column, with screenshots. An empty box means the step passed. The original was in Polish; this is an English translation, and the one screenshot of a Polish page was recreated in English. Internal paths are removed.

Articles, admin panel, assistant. Everything is already in production (seven pull requests). The articles section is hidden: without ?articles=on it answers 404.

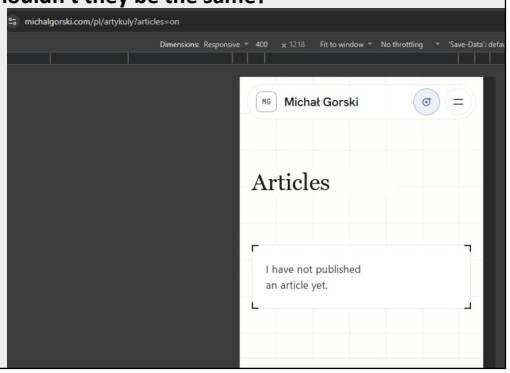

How to use it: go in order and type OK in the Result column, or describe what went wrong (you can paste a screenshot). Save the file, and I will read the results and fix the errors in one batch.

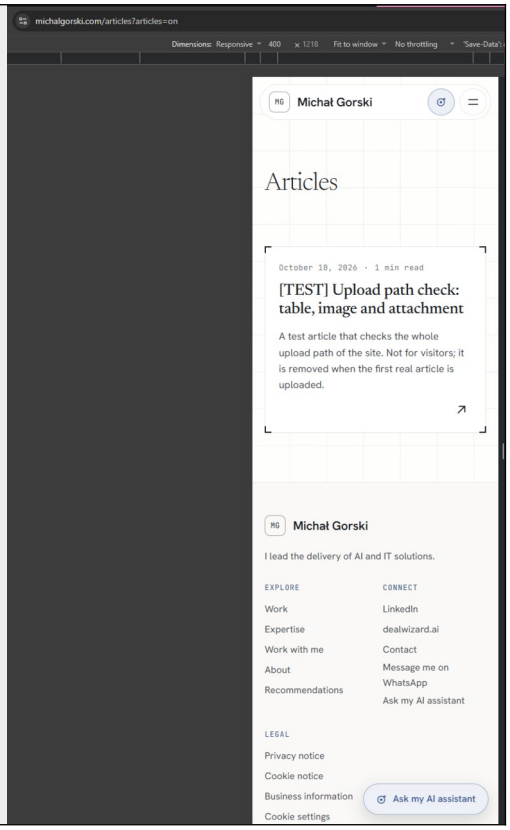

Test packages, in the test-packages folder:

good.zip (EN and PL, a table, an image, a PDF, warnings about numbers), good\ (the same files unpacked), bad\en.md (an em dash and an image without alt text; it must be rejected).

Time: about 30 to 40 minutes. The order matters: test 6 (the assistant) needs the article published in test 3, and test 9 cleans up after everything.

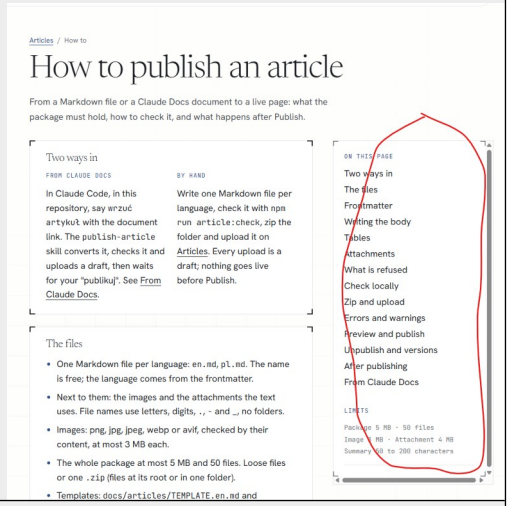

1. Hidden section (not logged in, private window)

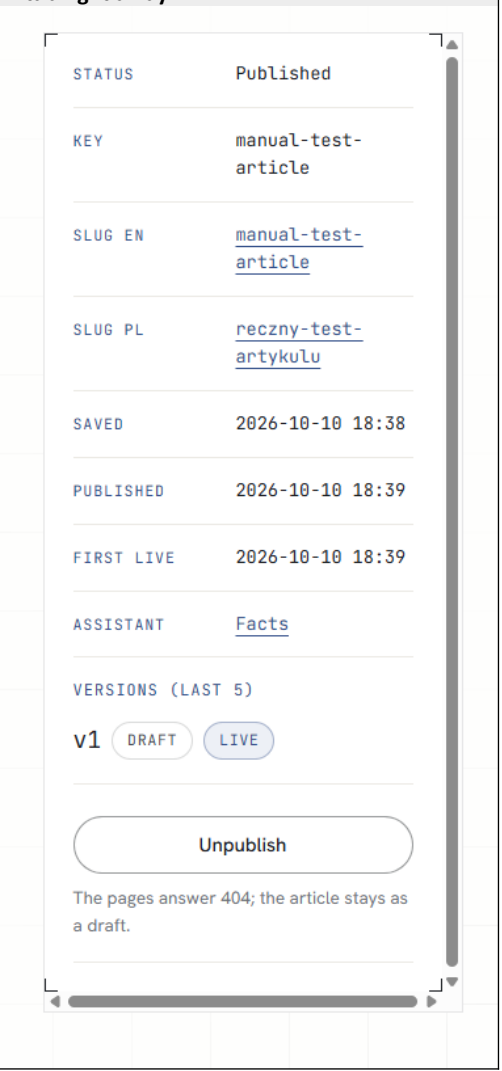

No.	What to do	Expected result	Result (OK / error, notes)
1.1	Open https://michalgorski.com/articles	A 404 page (the usual error page).	
1.2	Open https://michalgorski.com/articles?articles=on	The list of articles, heading Articles, no sentence under the heading. The list shows the article [TEST] Upload path check.	
1.3	Check the site menu (top and the phone menu)	No Articles item in the menu.	
1.4	Open https://michalgorski.com/pl/artykuly?articles=on	The list in Polish, heading Artykuły.	**The Polish page shows different things than the English one: the English list shows the test article, the Polish one says no article is published yet. Shouldn't they be the same?** 

2. Panel: upload and validation

Panel: https://michalgorski.com/admin/articles (Cloudflare Access login).

No.	What to do	Expected result	Result (OK / error, notes)
2.1	Open the panel, Articles tab	The list of articles, a drop zone for files, a link to the instructions (How to).	
2.2	Open the How to page	A page in English: file format, tables, images, attachments, checking, publishing.	**The navigation on the right does not look like navigation.** **It also has scroll bars that should not be there.** 
2.3	Drop in bad\en.md	Upload rejected: em dash error (line 9) and an image without alt text. Nothing saved.	

2.4	Drop in good.zip	Draft saved. Warnings: numbers (11, 2026, 404) with their sentences. Status Draft, version v1, a list of attachments with sizes.	
2.5	Click Preview English, then Preview Polish	A preview identical to the public page, with a preview bar: table, image, the Test checklist link (PDF, 1 KB), a collapsible block. The PDF link downloads the file.	
2.6	Click Publish without ticking Numbers checked	Publishing blocked (the numbers must be confirmed).	**After Publish, the article page should open in a new tab right away.** 

3. Publishing and the article page

No.	What to do	Expected result	Result (OK / error, notes)
3.1	Tick Numbers checked and click Publish	Status Published. The article is live at once, with no deploy.	
3.2	Private window: https://michalgorski.com/articles/manual-test-article	404 (no flag).	
3.3	Private window: https://michalgorski.com/articles/m	The article page: title, date, reading time, lead, table,	

	anual-test-article?articles=on	image, PDF link, collapsible block, the Ask the assistant about this article button.	
3.4	On a phone: the same address	The table fits or scrolls inside its own frame; the page does not move sideways.	
3.5	Click the PDF link	The file downloads (does not open in a tab).	
3.6	Click PL in the EN PL switch at the top	The Polish version of this article, with the flag kept in the address.	

4. An article without a second language version

No.	What to do	Expected result	Result (OK / error, notes)
4.1	Private window: https://michalgorski.com/articles/test-article-upload-path?articles=on, then PL in the switch	A Polish address with the message: This article has no Polish version. The English version follows. The English article below it.	

5. Contact from an article

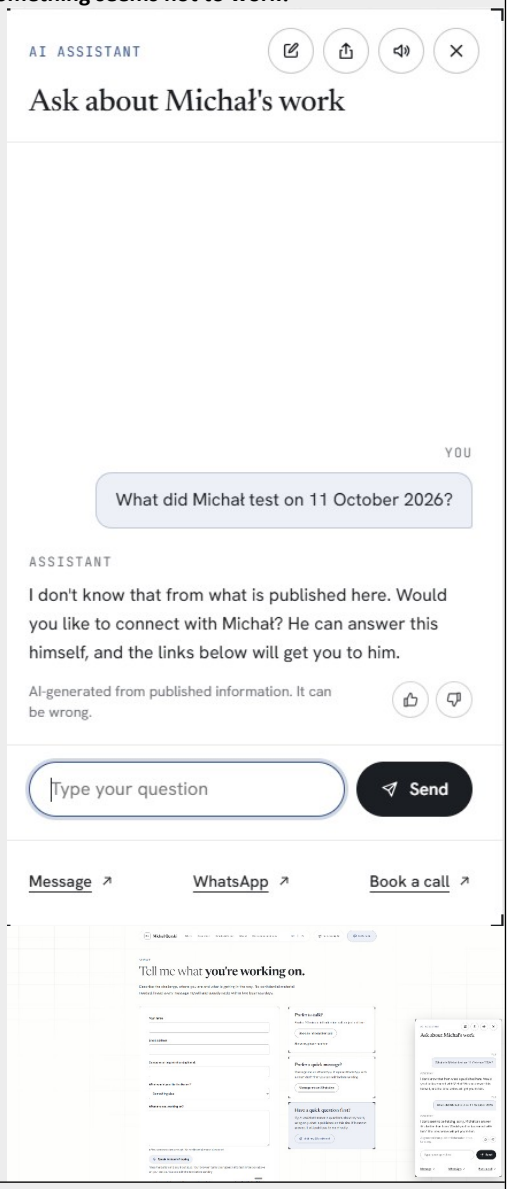

The article address in the enquiry comes with package P7 (in progress). Run this test after I tell you P7 is deployed.

No.	What to do	Expected result	Result (OK / error, notes)
5.1	On the article page (3.3), click the contact link at the bottom	The contact form; the address carries from=article.	**Still to do.**
5.2	Send a short test enquiry (for example TEST, ignore)	The enquiry email shows that it came from an article, with a clickable link to it.	**The email that arrived is really ugly. It should use my branding.** 

6. The assistant learns from the article

Applies to the article from test 3 (assistant: true). Fact extraction costs about 0.02 USD.

No.	What to do	Expected result	Result (OK / error, notes)
6.1	Check your inbox a few minutes after publishing	An email: Assistant learned N facts from [TEST] Manual test..., with the list of facts and a link to the facts page.	
6.2	Open the link from the email (the Facts page in the panel)	A list of facts with quotes, Edit and Delete buttons, Extract again, a character counter.	**Add a way to add new facts, not only edit them.**

6.3	Correct one fact (Edit, Save), delete another (Delete)	The corrected one is marked EDITED; the deleted one moves to Do not claim.	**There is no way to restore a deleted fact.**
6.4	On the site, ask the assistant: What did Michał test on 11 October 2026?	An answer based on the article (testing the article upload). No link to the article (the section is hidden).	**Something seems not to work?** 
6.5	Ask about the deleted fact	The assistant does not claim it.	

7. The path from Claude Docs (the publishing skill)

A new Claude Code session (any folder).

No.	What to do	Expected result	Result (OK / error, notes)
7.1	Create a short document in Claude Docs (2 or 3 paragraphs, a title starting with [TEST], one table), then write: upload this article to the server	The skill takes this document without a link, builds the package, shows the warnings and uploads a draft. You get a preview link. Nothing is published.	**And how do I upload PDFs and attachments there? And how do I upload bilingual articles?**
7.2	Write: publish (after confirming the numbers)	The article is published; the links work live with ?articles=on.	

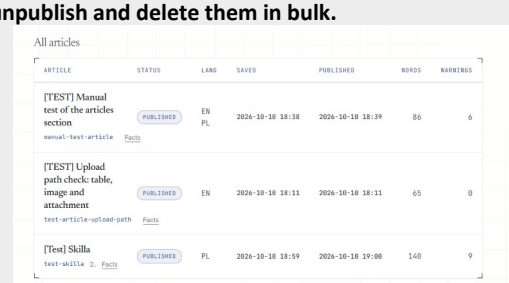

7.3	Check this article in the Articles panel	Shown as Published, version v1.	

8. Checking a file locally (optional)

No.	What to do	Expected result	Result (OK / error, notes)
8.1	In a terminal, from the repository root: npm run article:check -- test-packages\bad	FAILED 2 error(s): em dash and missing alt text.	
8.2	The same for the good folder	OK, 6 warnings about numbers.	

9. Clean-up

At the end, so test content does not stay in the assistant.

No.	What to do	Expected result	Result (OK / error, notes)
9.1	In the panel: Unpublish manual-test-article and the article from test 7	Status Draft; the addresses with ?articles=on answer 404.	**Make the items on this list selectable, so I can unpublish and delete them in bulk.** 
9.2	Ask the assistant as in 6.4	The assistant no longer knows the fact from the test.	
9.3	Leave the article [TEST] Upload path check	I will remove it with the first real article.	

General notes

Next time, assume that an empty box means OK.
